## WORLD LIVESTOCK NUMBERS, RED MEAT PRODUCTION, CONSUMPTION AND TRADE 1974-78

### Livestock Numbers

Beginning 1978 cattle numbers in the 54 selected countries reported in this circular were about 955 million head<sup>1</sup>. This level is 2.3 million head lower than the inventory on the same date in 1977 and represents the third annual decline from the record inventory level of January 1975.

The pattern of changes in cattle inventories has varied among the world's major beef producing and trading countries. In Latin America, Europe, the Soviet Union, and Asia, beginning cattle inventories in 1978 were above year-earlier levels. In fact, cattle herds in Latin America and the Soviet Union were at record levels. However, within Latin America, cattle herds in Argentina and Uruguay declined to 900,000 and 800,000 head respectively. In other important producing and trading areas of North America and Oceania, cattle herds in 1978 were significantly below those in 1977: United States, down 6 million head; Canada, down 800,000; Australia, down 2 million, and New Zealand, down 200,000.

Hog numbers in the major pork-producing countries increased during 1977 to a level of nearly 400 million head, a gain of nearly 19.3 million over the beginning 1977 figure. In the United States swine numbers jumped by about 1.7 million head in response to favorable hog/corn price ratios. A similar increase occurred in the European Community. The most dramatic gains, however, took place in Eastern Europe and the Soviet Union where swine numbers rose by 4.7 million and 7.2 million head, respectively. This was the result of continued government emphasis on expanding the livestock sector and represents a recovery from earlier heavy slaughtering because of poor crops. In Japan, favorable prices encouraged a growth in swine numbers by 1 million head in 1977.

In recent years the goat population of the world's major livestock producers has remained relatively stable at just under 150 million head. Over two thirds of the world's goats are in Asia with India alone accounting for about 50 percent of the total.

World sheep numbers in 1978 rose slightly above the level at the beginning of 1977 to 706.8 million head. In recent years the world's sheep population has been dropping particularly in Australia and the United States, although the rate of decline in these two countries slowed somewhat during 1977. In South America, Western Europe, Eastern Europe, the Soviet Union, and in Asia sheep numbers made a modest recovery during 1977, resulting in a net addition of 400,000 head to the world sheep population.

The world's horse population fell slightly during 1977 but remains near 40 million head, not much changed since 1974. Modest reductions appeared in Western and Eastern Europe, as tractors replaced draft animals.

### Slaughter

World cattle slaughter in 1977 rose to a new record, 1 percent above the previous record of 1976. The slaughter reached unprecedented highs in Canada, Argentina, Uruguay, and Australia. In the United States, New Zealand, and Western Europe cattle slaughter fell below that of 1976, but still remained relatively high in comparison with earlier years. Drought accounted for the sustained high slaughter in New Zealand. World cattle slaughter is expected to decline in 1978 for the first time since 1971. The most significant reductions are expected in the United States, down 7 percent; Canada, down 5 percent; Australia, down 9 percent; and New Zealand, down 8 percent.

Hog slaughter in selected countries in 1978 is forecast to be almost 3 percent above 1977 levels and to reach the highest level in history. Favorable grain prices, plus increasing prices for competing meats, have strengthened consumer interest in pork and are leading to heavy hog marketings in the world's major hog-producing countries. Gains in hog slaughter in the United States and Western Europe are expected to be on the order of 1 to 2 percent. However, larger increases are expected in Eastern Europe, especially Poland, and also in Japan, Spain, and Brazil.

Sheep slaughter in 1978 is expected to be slightly above last year's but below the 1976 record. In North America the slaughtering of sheep continues to decline as it has since 1970. However, in South America, particularly in Brazil and Uruguay, the sheep kill is forecast to increase because of strong domestic demand for meat. In New Zealand, sheep slaughter is expected to rise to meet strong export demand especially in markets of the Middle East.

## **Production**

Total red meat production in selected countries continued to increase in 1977 and is forecast to rise slightly more than 1 percent in 1978. U.S. red meat production dropped marginally in 1977 from 1976's record level and estimates for 1978 indicate a further 3 percent reduction. U.S. beef production in 1977 fell 3 percent below the record 1976 level as herd liquidation, because of low cattle prices, continued for the third consecutive year. With herd liquidation expected to continue in 1978, beef and veal production will be an estimated 4-5 percent below the 1977 level. This decline will more than offset projected higher pork output.

Red meat production in the European Community for 1978 is forecast near 15.5 million tons, a very slight increase over 1977's output. Larger output in France, West Germany, Denmark, and Italy is expected to offset lower production in other member countries. Pork production—which accounts for over 50 percent of all red meat supplies—is forecast to increase to over 8.4 million tons. Beef and veal production, which was down 3 percent in 1977, is expected to increase slightly in 1978.

Canada's red meat production is expected to be virtually unchanged from 1977 levels in 1978. Larger pork output is expected to almost compensate for reductions in beef production.

Japan's red meat production rose to 1.5 million tons in 1977, up 11 percent over the 1976 level and is forecast to rise 4 percent in 1978. Favorable feed prices pushed pork production up in 1977 and the trend is expected to continue in 1978. Pork is the major red meat in Japan, accounting for approximately 75 percent of total red meat production. Beef production is roughly 24 percent of the total.

Production of red meat in the USSR was up 7 percent in 1977 and is forecast to rise further in 1978. Beef and veal moved up 4 percent in 1977 with an outlook for a similar increase in 1978.

## **Trade**

International trade in red meat in selected countries, as measured by imports, increased during 1977 to almost 6.4 million tons but is expected to decline slightly in 1978. Imports of beef should remain at about 3.2 million tons in 1978, with larger entries into the United States and Brazil compensated by lower imports by the Soviet Union and Eastern Europe. Pork imports are forecast to decline due to expanded domestic supplies in Europe, Canada, and Japan. Lamb trade is estimated to remain stable.

## **Consumption**

Consumption of red meat edged up about 3 percent in 1977 to 75.0 million tons and is forecast to be marginally higher, at 75.7 million tons, in 1978. North America was, however the only area to expect a reduction in total red meat consumption in 1978, because of lower beef consumption in the United States and Canada.

Pork consumption is forecast to continue to rise in 1978 in all areas. Lamb, mutton, and goat meat consumption is expected to remain relatively stable at about 4.8 million tons.

---

This level is substantially above world levels cited in the FAS circular of June 1977 because of the recent inclusion of India in the country coverage. Although India has by far the largest cattle herd in the world (more than double that of the United States or the Soviet Union), India is not a significant factor in world livestock or meat trade.
